PLANET  
3COIN

## ABSTRACT

Planet 3, known as Earth, is the only one of its kind with vast forms of life and a diverse biological infrastructure. Throughout decades, the struggle to preserve the 4.5-billion-year-old world and its ecosystem continues.

To solve an impending crisis, the guardian has bestowed mankind with the wisdom of the cosmos. The Guardian key, known as the Planet 3 Coin, has arrived with three distinctive missions. The first is to inspire and energise the collective consciousness of mankind. Statistical findings suggest that 689 million people are in poverty, while 51% (half of 7.7 billion) of the world's population is in the low-income bracket. This undeniable fact indicates that the preservation of the 3rd planet and conservation of its ecosystem is in the hands of an immobilised and impoverished majority. The project will solve the pressing issue of opportunity and independence by utilising smart contract tokenomics to inspire, energise and fulfil the survival and expressive needs of humanity. Once we alter the circumstances of billions, we will then be able to redirect their hearts and minds to our second mission of preserving the 3rd planet and last mission of conserving all its wonders (the ecosystem of life).

Together with wisdom of the cosmos and millions of participators we will advance the world to a new world order of self-sufficiency, self-reliance and self-governance. The future of the earth is in the hands of its people, the custodians.

## INTRODUCTION

Planet 3 Coin protocol is a deflationary token which means once minted, no more can be created. The smart contract coding of the token utilises a taxation system known as tokenomics. Tokenomics (or token economics) affords taxation from every buy, sell and transfers. The collection of these taxes is automatically transferred into designated wallets, which allows the project to alter the course of the Earth and all living organisms.

Two wallets, the Earth Bank Wallet and Humanity Fund Wallet, will receive taxations from every buy, sell and transfer to fund our 3 missions of:

1. Mankind — Fulfilling the survival and expressive needs of millions
2. Earth — Preserve the planet
3. Ecosystem — Conserve all of its natural wonders of life.

Furthermore, the project will initiate three system of rewards. These will offer growth, opportunities and independence to the people of the world.

## TOKEN DISTRIBUTION

30 trillion of deflationary tokens were minted. The quantification of 30 trillion was made based on two reasoning. First, the total circulating supply of US Dollars in the entire world which is around 40 to 45 trillion. Second, humanity, the world and the ecosystem requires a reasonable supply for all potential investors of the world to facilitate growth.

## THE 4 PROJECT WALLETS

**Earth Bank Wallet** — 5.7% of the tokens have been allocated for preservation of the planet and conservation of all its natural wonders. The wallet will also receive BNB from the Earth Bank tax from all buys, sells and transfers (see tokenomics).

**Humanity Fund Wallet** — 2.5% of the tokens have been allocated for the survival and basic needs of humanity. The wallet will also receive BNB from the award pool tax from all buys, sells and transfers (see tokenomics).

**Marketing Wallet** — 1.83% of the tokens have been allocated for marketing. The team must ensure that every dollar spent yields an equal return. Taxation from the community is not required for marketing; I believe investing in the grassroots network will have a bigger outreach. Word of mouth is the most effective marketing tool, in both cost and impact.

**Team Wallet** — 8.33% of the tokens have been allocated for the productivity and basic needs of the developer and his worldwide international team. To tackle the pressing issues of the world, we must alleviate the daily stressors of the team in the effort of changing the circumstances holding millions of people back.

## LOCKED WALLETS

**Token Reserve** — 90% of the tokens in the reserve wallet will be locked for three months. The 10% unlocked tokens, equal to 5% of total supply, allows room for early listing on exchanges in an unforeseeable growth spurt in the three-month period.

**Earth Bank and Humanity Fund** — 70% of the tokens in both wallets will be locked for six months. The rationale for the longer period is due to decision to allow these wallets to receive reflection distribution in BNB token. The use of BNB reduces the impact of selling for different purposes, especially for good causes, which could affect the stability of the project. These are the only two wallets that will receive BNB reflections.

**Team Wallet** — 70% of the wallet will be locked from sale for two months to stabilise the project, to facilitate growth and promote confidence. The 30% of unlocked tokens is equal to 2.5% of the total supply. Once the lock period lapses, I will review the project and reinstate the lock accordingly.

**Private sale** — all private sale buys will be locked for two months and released to the respective investors

## TOKENOMICS

Token economics (tokenomics) is a revolution coding system that allows projects to assign taxation for growth, rewards and funding causes. Planet 3 Coin has a carefully balanced tax for each transaction within the ecosystem.

10% Buy Tax		12% Sell Tax		10% Transfer Tax	
Award Pool	3%	Award Pool	4%	Award Pool	4%
Earth Bank	2%	Earth Bank	2%	Earth Bank	2%
Reflection Reward	2%	Reflection Reward	2%	Liquidity Pool	4%
Liquidity Pool	3%	Liquidity Pool	4%		

Humanity Fund  
Wallet

The **Award Pool** receives 3% from every Planet 3 Coin buy, 4% from every sells, and 4% from every wallet to wallet transfer. These are then swapped for BNB and transferred to the Humanity Fund Wallet to facilitate the Free-Bird Competition.

Earth Bank  
Wallet

The **Earth Bank wallet** receives 2% from every buy, 2% from every sell and 2% from every transfer, which are then swapped for BNB and transferred to the Earth Bank Wallet to facilitate the second and third mission of the project.

Reflections  
Rewards

**Reflection Reward** is 2% from buys and 2% from sell, which will be redistributed to all of the Planet 3 Coin holders. This simply means that every time a supporter of the project buys or sells, the existing owners will get rewarded Planet 3 Coin from the taxation.

Liquidity Pool

The **Liquidity Pool** receives 3% from every buy, 4% from every sell and 4% from every transfer. What is liquidity pool? Simply put, it is like the cash register in a retail shop which facilitates the exchange of one item of value for another. The valuable currency, in our case BNB, is stored in a digital pool of the project after every purchase.

Transfer tax — the wallet-to-wallet Planet 3 Coin transfer tax will be 5%. Holders should not be heavily taxed for simply wanting to divide their assets, share their holdings with friends and family or simply for security reasons. Reflection reward tax has been eliminated from the transfer tax as it is unfair for loyal holders to contribute three times, on buys, transfers and eventual sales.

## THREE REWARD SYSTEMS

To change the lives of millions, we will initiate 3 systems aimed at fulfilling the survival and expressive needs of mankind:

- 1) Reflection rewards — is aimed at providing growth of investments over time.
- 2) The Free-Bird Competition — offers opportunity by initiating competitions in performance, creativity, influencer and humanitarian award.
- 3) Website Platform — the most advanced and revolutionary website platform in the entire crypto world, aimed at providing humanity with the necessary tools for self sufficiency, self reliance and self governance. The website development will take place once certain milestones are achieved to fund its creation.

## FREE-BIRD COMPETITION

Free-Bird  
Competition

Planet 3 Coin project will host international competitions to offer humanity opportunities of earnings, independence and freedom of expression. The award pool tax from buys, sells and transfers will be the funding source of competitions.

The international competitions will initially take place every two weeks. However, as the project grows, the team aims to adjust the time frame accordingly and host-region specific competitions in most countries of the world.

## The categories of competitions are:

- I. **Performance** - acting, dance, singing, gaming and other entertainments.
- II. **Creativity** - creative writing, inventions, science challenges, cinematography and others.
- III. **Influencer** - most impactful positive upcoming unknown; YouTuber, TikTok etc
- IV. **Humanitarian award** - most unrecognized and underprivileged person or institutions (school, orphanage etc)

The prize pool will begin with \$20,000 which will increase monthly by a fixed determined amount, meaning the total award prize will grow overtime.

The \$20,000 award will be divided between the top ten:

**1st — \$5600**

**2nd — \$3400**

**3rd — \$2600**

4th — \$1800

5th — \$1600

6th — \$1400

7th — \$1200

8th — \$1000

9th — \$800

10th — \$600

Free-Bird  
Competition

**Note:** To participate in the competitions, you must hold a minimum of \$50 dollars worth of Planet 3 Coin.

PLANET  
3 COIN

## THE GUARDIAN MODE

### Guardian Mode

The guardian mode is a function I conceptualised and quantified to protect the project and investors. Before we dive into the purpose of the function, we shall first explore the problem it is trying to solve.

The survival of most projects in a saturated market of hundreds of newly launched tokens is dependent on two factors. The first factor is the health of the project's liquidity pool, which facilitates transaction and in turn maintains the project. The second factor is the projects means to attract new investors who sustain the project's liquidity.

Projects are susceptible to attacks from opportunists the same way a cash register or bank vault have their vulnerabilities. Those with means, usually some bad actors with deep pockets in the crypto space, are able to strategically drain the liquidity pool by making systematic purchases, usually large buys divided into small buys, which cause a frenzy of buys from small investors who flock in out of fear of missing out (fomo) from the perceived gains. They then drain the liquidity pool with systematic sales after they have multiplied their investment, which in turn causes other investors to panic and sell. The cycle of systematic buys and sales continues until the project liquidity pool is drained.

Once new investors assess the chart and liquidity of a project, they quickly assume that the project is dead or unable to recover.

Therefore, the first protective measure of the liquidity pool is the taxation of all buys, sales and transfers to sustain its health. The higher taxation of 14% on all sales is a means to reward holders and tax sellers who have no interest in the mission of the project.

he second protective measure, named the Guardian Mode, is a special code embedded in the smart contract of the token designed to specifically protect the liquidity pool from extreme manipulation.

The function's default is off, I will activate the function after I consults chart analyst and senior team members when suspicious activities have been detected. Once activated, the mode initiates a 24-hour timer which imposes a 3-stage sell function on all wallets holding Planet 3 Coin including the developer himself and all the project wallets. No investor is excluded from the function once activated. The function has been coded to automatically switch off. Investors will be informed every time the mode is activated, my team and I will make an announcement.

### 3 Stages of The Guardian Mode:

Stage 1 — all investors are restricted to one single sell transaction which is a maximum of 50% of their Planet 3 Coin holdings. For example, a holder of \$100,000 worth of tokens can only sell a maximum of \$50,000 which is equal to half. However, if the holder chooses to sell a lesser amount, such as 25% or even 10%, it will still be computed as a single acceptable transaction within the 50% threshold. Since one transaction is permitted within the maximum cap, investors should choose their first stage sell amount wisely.

Stage 2 — all holders must wait six(6) hours after their first sale to make another sale. Any attempts to make the second stage sell sooner than six(6) hours will be declined. However, once the restricted time has elapsed, holders are able to sell a maximum of 50% of their remaining holdings. In the example made in stage one, the holder with the remaining \$50,000 is permitted to sell a maximum of half, which is equal to \$25,000. Only one transaction is permitted within the maximum cap. Investors should choose their second stage sale amount wisely.

Stage 3 — in the last stage, all holders must wait four(4) hours after their second sale to be able to make another sale. Any attempted sell sooner than four(4) hours will be declined. After the restricted time has elapsed, holders are able to sell 100% of their remaining Planet 3 Coin holdings.

The function protects the liquidity pool by facilitating sufficient time for new buyers to come in and maintain its health. The time restrictions of six and four hours mean that the total restricted period after the first initial sell is a minimum of ten hours. The mode allows holders to exit the project within the same day if they choose to but they must do so with consideration.

## LEGACY

To revolutionize the cryptocurrency space, our extraordinary strategy will be as follows;

- 1) Team — We will deploy a vigorous selection process of interviews and training for admins and secretaries. Those in the first point of contact role should showcase professionalism, basic knowledge and know how of excellence in service.
- 2) 7 Effective Marketing Strategy — every dollar spent must at least yield an equal return. We will utilise a revolutionary marketing strategy that has never been utilised in cryptocurrency. 7 effective areas of relentless push will be aimed at recruiting new investors outside the 2% of the world population participating in cryptocurrency.
- 3) Community — to build a true community by every sense of the word, we must be more than investors in a common place. We must have a sense commonality, understanding, good will and humanity. The feelings we give others, coupled with how the project is managed, is the basic foundation of building a long lasting community, sustainable growth and a worthy legacy.

*Legacy is not only setting new standards but its also having something worth believing in and worth fighting for.*

*Planet 3 Coin will be a legacy project years into the future.*
